

**SUPREME INTEGRATED
TECHNOLOGY, INC.**

CREATING STRUCTURES IN MOTION
OFFSHORE INTEGRATED SOLUTIONS

Supreme Integrated Technology –
North American Partner for Emerson Marine
The Leader in Electro-Hydraulic Hull System Solutions

INTEGRATED HULL PACKAGE INCLUSIVE OF:
Hull System Automation & Integration with Topside
Ballast System Control & Monitoring
Tank Level Gauging
Flow and Pressure Control
Valves and Valve Control Technologies
Cargo Management
Component sizing and Certifications
Bunkering
Custody Transfer
Asset Management
Fuel Management
System Drawing Submittals
Factory Equipment Approval and Testing
System Commissioning
Life Cycle Support

PROJECT EXPERIENCE

Construction Vessels
Container Ships
Cruise Ships
Floating Production and Offloading Vessels
Jack-up Rigs
Offshore Supply Vessels
Semi Submersibles Rig
Spars
Tankers
Tension Leg Platforms

HULL SYSTEM AUTOMATION, CONTROL & MONITORING

Working with the Emerson Aperio system, we deliver integrated control and monitoring functions on any type of ship and application, e.g. engines, generators, switchboards and other service systems ...

- ~ **Operational Continuity** - Get a single-point overview – from the specific component to total system
- ~ **Better Decision-Critical Data Control** - Remote and automated control of valves, pumps, motors and other critical hull systems
- ~ **Deep Insight Monitoring** - Dynamic coloring of pipelines, valves, pumps and tanks to track cargo flow; self-diagnostic tools; trend and performance monitoring
- ~ **Enhanced Alarm Safety** - Create safeguards and conditional warnings to avoid dangerous operations; independent high-level and overflow alarm; Advanced alarm filtering and distribution, enabling alarm indications at the right locations and in relevant situations

Supreme Integrated Technology –
 North American Partner for Emerson Marine
 The Leader in Electro-Hydraulic Hull System Solutions

ROSEMOUNT
 Tank Gauging

CARGO MONITORING & TANK LEVEL GAUGING

Rosemount Tank Gauging System measures and calculates tank data for custody transfer, inventory management, oil/product movement, mass balance and loss control, operational and blending control as well as leak detection and overfill prevention. The system can be configured to provide the following:

- ~ Net volume
- ~ Complete inventory, hybrid and custody transfer functions
- ~ Total observed volume and observed density calculations
- ~ Level, level rate, temperature and free water interface level measurement
- ~ Multiple spot temperature sensors for average calculations
- ~ Interoperability with all major DCS and host systems
- ~ Automatic proof-testing without affecting tank operations

CUSTODY TRANSFER

Flow measurement accuracy is the heart of custody transfer of materials from seller to buyer. To ensure safe and reliable measurement of product flow, SIT provides expertise and state-of-the-art technologies through Emerson to provide seamless and reliable integration of all system components for precise measurement despite varying operating conditions and harsh environments.

FUEL MANAGEMENT

Emerson's Integrated Control and Monitoring System helps you comply with environmental regulations, get accurate real-time data and obtain an overview of fuel, engine and vessel performance. Integrate measurements and control over the entire fuel management system from bunkering to consumption.

- ~ Fuel Bunkering
- ~ Fuel Viscosity
- ~ Fuel Consumption

VALVE REMOTE CONTROL

SIT provides a broad offering of actuation technologies for the valve manufacturer of choice and provide a full range (pneumatic, hydraulic, electric, electro-hydraulic) of custom integrated control solutions.

BETTIS

SUBSEA APPLICATIONS

Bettis GS – The symmetrical scotch yoke mechanism provides quarter-turn rotation. GS-Series actuators are available with diver or ROV intervention systems. The actuators are well suited for riser and other fail-safe applications.

Dantorque

Dantorque – Very compact and fully concentric, thanks to the helical spline drive mechanism and disk springs – the proven design provides space savings and reliability.

Schafer – Shafer rotary vane actuators produce balanced quarter-turn torque without the need for any internal gearing or power conversion mechanism. The rotary vane actuators are excellent for manifold and other tight space applications.

Damcos

OFFSHORE APPLICATIONS – Emerson Damcos Actuators

Central or Local Power Unit (LPU) Options – built on a standard modular platform, possible to configure and scale the unit as requirements demand. The LPU option reduces the chance for contamination in the system, smaller footprint, less weight, environmentally friendly and offers a capital expenditure savings resulting from a significantly lower installed cost.

Actuators – compact & torque dense, the Damcos helical gear design sets the benchmark for marine industry valve operation and control.

Control Cabinets – standardized solenoid valve cabinet, able to support up to 120 valve controls. Each valve can be isolated and independently controlled, thereby reducing downtime and making repairs easier.

Custom Hydraulic Systems – with over 40 years of experience designing and building hydraulic systems, you can have confidence in SIT's ability to develop, build and test custom hydraulic power units and systems for any challenging applications including:

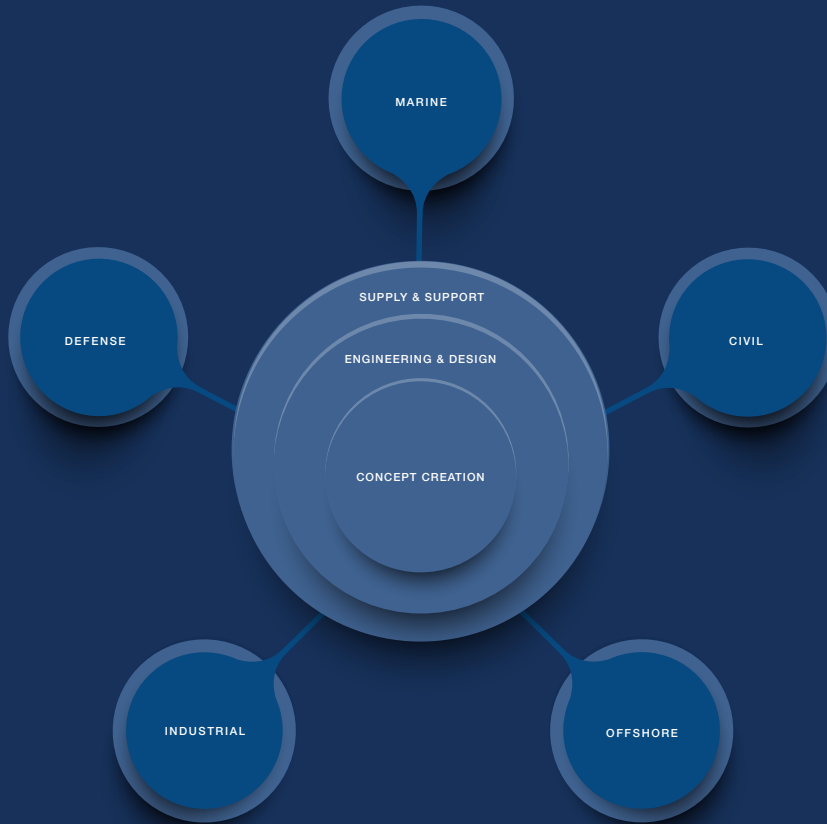

- ~ Central & Subsea LPUs
- ~ Solenoid Valve Manifolds
- ~ Steering Systems
- ~ Dewatering Systems
- ~ Ballast Control Systems
- ~ Test HP OS
- ~ Dump Scow Systems

SERVICE AND SUPPORT

50,000 sq feet manufacturing space between fabrication facility in New Orleans, LA and assembly shop in Houston, TX. All facilities ISO 9001:2015 Certified with ability for remote testing capabilities. Extensive Emerson inventory for fast quick turnaround on custom subassemblies, repairs and testing.

WITH OUR CORE OF EXPERTISE, SIT HAS ACCOMPLISHED
PROJECTS FOR A LARGE VARIETY OF INDUSTRIES.
